

django

Django

Django is a Python-based free and open-source web framework that follows the model–template–views (MTV) architectural pattern. It is maintained by the Django Software Foundation (DSF), an American independent organisation established as a non-profit. Django's primary goal is to ease the creation of complex, database-driven websites. Django also provides an optional administrative create, read, update and delete interface that is generated dynamically through introspection and configured via admin models.
